Department of Health

To the Honourable F. W. Johnson
Lieutenant Governor of Saskatchewan

May It Please Your Honour:

I have the honour to present herewith, for your consideration, the Interim Report on Saskatchewan Vital Statistics for the calendar year 1984.

Respectfully submitted,

Graham Taylor
Minister of Health

Department of Health

To the Honourable Graham Taylor
Minister of Health

Sir:

I have the honour to forward herewith the Interim Report on Saskatchewan Vital Statistics for the calendar year 1984.

This interim report presents a concise record of those vital events which occurred in Saskatchewan during the calendar year 1984.

The Final Vital Statistics Annual Report will be published following the Department of Health's receipt of additional information from Statistics Canada in Ottawa. For this reason, the data presented in this Vital Statistics Interim Report may not be reconciled with the information which will be presented in the Final Vital Statistics Annual Report.

Respectfully submitted

Walter Podiluk
Deputy Minister of Health

Terms and Definitions

A summary of symbols, definitions, and the method of computing rates used in this report are given below.

Definitions

Population	This report contains postcensal estimates for 1983 - 1984.
Live Births	Infants born alive, i.e., excluding stillbirths.
Stillbirths	Unless otherwise indicated, foetal deaths of 28 or more weeks' gestation.
Deaths	Excludes stillbirths.
Infant Deaths	Deaths under 1 year of age.
Neonatal Deaths	Deaths under 28 days (4 weeks) of age.
Perinatal Deaths	Foetal deaths of 20 or more weeks' gestation plus infant deaths under 7 days (1 week) of age.
Natural Increase	Excess of births over deaths.

Rates (unless otherwise indicated, computed as follows)

Live Births	: per 1,000 population
Stillbirths	: per 1,000 live births
Infant	: per 1,000 live births
Neonatal	: per 1,000 live births
Perinatal	: per 1,000 live births and stillbirths

Causes of Death

All Causes	: per 100,000 population
Infant	: per 1,000 live births
Marriages	: per 1,000 population
Divorces	: per 100,000 population
Natural Increase	: per 1,000 population

Notes

1. Causes of death are classified according to the 9th (1975) Revision of the International Classification of Diseases, Injuries and Causes of Death, which was put into effect on January 1, 1979.

Introduction

The Vital Statistics Interim Report presents a concise record of those vital events which occurred in Saskatchewan during the calendar year 1984. The Interim Report has been prepared in response to the requirements contained in the Tabling of Documents Act (1973). The present methods utilized in the collection of data for the Vital Statistics Annual Report do not permit the tabling of the Annual Report within the time frame established by this legislation. The Vital Statistics Annual Report will be published following the Department of Health's receipt of the necessary information from Statistics Canada in Ottawa.

The Vital Statistics Interim Report - 1984 records vital events by place of occurrence for 1984 (vital events which occurred in Saskatchewan in 1984). It includes for example, births to Saskatchewan residents who were in the province at the time of giving birth and residents of other provinces (or countries) who were in Saskatchewan at the time of giving birth. The data in this report are based on original registration forms and do not include amendments. The Vital Statistics Annual Report, on the other hand, records vital events by place of residence (vital events involving Saskatchewan residents whether or not the resident was in the province at the time of the event) and includes amended information. The vital events recorded in this report for years previous to 1983 are by place of residence.

A. Population

1. The Historical Trend

The estimated population of 1,006,200 for 1984 is an increase of 1.36 per cent over the 1983 estimated population of 992,700.

2. The Percentage Distribution of the Total Population

During the past 30 years, the proportion of older people (65 years of age and over) has been increasing in Canada as a whole and in Saskatchewan. In Saskatchewan, however, the proportion of persons 65 years of age and over is greater than in Canada as a whole (12.3 percent and 10.2 percent respectively).

B. Births

1. Live Births

During the year 1984 a total of 18,090 live births occurred in the Province of Saskatchewan. This total includes births to Saskatchewan mothers residing in the Province of Saskatchewan at the time of giving birth and those births occurring to mothers who normally reside outside the province but who were in Saskatchewan at the time of giving birth.

The total of 18,090 live births represents a birth rate of 18.0 live births per 1,000 population, slightly higher than last year's birth rate.

The 1982 live birth rates for Saskatchewan, for Canada, and for the Provinces are shown below for comparison.

British Columbia	15.3

*1983 final figures were not available for the publication of this report

2. Stillbirths

During the year 1984 a total of 126 stillbirths occurred in the province. The definition of occurrence is given in the introduction.

The 126 stillbirths occurred after 20 or more weeks gestation; 86 of the stillbirths occurred after 28 or more weeks gestation. These two totals represent rates of 7.0 and 4.8 stillbirths per 1,000 live births, respectively.

C. Deaths

During the year 1984 a total of 7,712 deaths occurred within the Province of Saskatchewan. This represents a crude death rate of 7.7 deaths per 1,000 population, the same crude death rate experienced in 1983.

The 1983 crude death rates for Saskatchewan, for Canada, and for the provinces are shown in the table below for comparison.

*Crude Rate per 100,000 population (Statistics Canada Population Base)

Accidents and Violence

During the year 1984 a total of 480 deaths due to accidents occurred in the Province of Saskatchewan. This represents a rate of 47.7 deaths by accident per 100,000 population in 1984 as compared to a rate of 48.7 deaths by accident per 100,000 population in 1983.

The number of suicides which occurred in Saskatchewan during 1984 was 134, a rate of 13.3 suicides per 100,000 population, down from the 1983 number of 144.

There were 28 homicides in Saskatchewan in 1984, a decrease from the 1983 number of 32 homicides.

D. Natural Increase in Population

In Saskatchewan from 1972 - 1974 the natural increase exceeded the net increase in population indicating net emigration from the province. In 1984 the natural increase was 10,378 and the estimated actual increase was 13,500 giving rates per 1,000 population of 10.3 and 13.4 respectively. This indicates a net immigration into Saskatchewan.

E. Marriages

During the year 1984 a total of 7,213 marriages occurred in Saskatchewan. This total represents a rate of 7.2 marriages per 1,000 population. Marriage rates for Canada, the Provinces, and Saskatchewan for 1983 are given below for comparison.

Table 10. Marriage Rate per 1,000 Population, Canada and the Provinces, 1983

Nova Scotia	7.6
New Brunswick	7.4
Quebec	5.5
Ontario	8.0
Manitoba	7.9
Saskatchewan	7.6
Alberta	9.0
British Columbia	8.4

F. Divorces

In 1984 a total of 1,968 divorces and annulments were registered under the Vital Statistics Act in Saskatchewan at the time of publication. This does not represent the total number of divorce petitions filed in 1984 since some petitions are not yet finalized.

G. Life Expectancy

A life expectancy table is, in effect, the history of mortality of 100,000 male babies and of 100,000 female babies born at the same time. Life expectancy figures provide a graphic picture of the extent to which the saving of lives has gradually prolonged the average expectation of life and are a fairly good reflection of the general health and survival conditions at the time of their compilation.

According to the Saskatchewan life table compiled on the basis of the 1981 census, the life expectancy at birth reached an all time peak for females, 79.61 years, and for males, 72.43 years. The gain in life expectancy is greater in females. A sharp rise in the probability of death begins at age 56 for males and at 65 for females. The decrease in life expectancy is greater for males than for females.

Table 11. Life Expectancy, Saskatchewan, 1941, 1961, 1971, 1981

Note: Source of figures for 1941: Life Tables for Canada and Regions, 1941 and 1931, D.B.S. Ottawa 1947. These figures have been calculated for the prairie provinces. The figures for 1961 and 1971 were calculated for Saskatchewan by the Department of Health. The figures for 1981 were taken from the Statistics Canada publication, Life Tables, Canada and Provinces, 1980-1982.

H. Adoptions

There were 705 adoptions registered in Saskatchewan during 1984, compared to 784 adoptions in 1983. The total of 705 adoptions registered includes out-of-province adoptions of persons born in Saskatchewan as well as adoptions in Saskatchewan of persons born elsewhere.

I. Legal Changes of Name

During 1984 a total of 1,078 legal changes of name were registered in Saskatchewan. This represents a slight increase over the 1,062 changes of name registered in 1983. The total of 1,078 does not reflect the number of persons who changed their name as each application may affect more than one person and in some cases, an entire family.
